PREFACE

Following the series of tsunami disasters after 2004, a lot of effort was put not only into developing tsunami early warning systems but also into community preparedness. A number of awareness, preparedness and education tools and materials were developed through various activities by national and international institutions.

Indonesia, Thailand, and the Philippines are among the countries that have developed numbers of these materials for public, community and schools (i.e., public awareness tools, assessment tools, training material, best practice information and other relevant information). However, some of these materials are now out of print and some are only available in electronic copies for wider public usage.

This booklet provides information of a depository of tsunami awareness and education available in Indonesia, Thailand, and the Philippines. All publication documented and recorded in this booklet (books, booklets, comics, posters, leaflets, stickers, CDs/DVDs as well as games) are available and can be adapted, re-produced or re-printed as needed for a more wider public usage.

This booklet also provides contact information of institution or organization that have the ownership or the publication, any interested organization who are interested to adapt or re-produce these materials can either contact the organization directly or through the Jakarta Tsunami Information Center of UNESCO Office Jakarta.

HOW TO USE THIS BOOK

This book consists of eight categories; Book, Booklet, Comic, Poster/Leaflet, Sticker, CD/DVD, Game and Other. In each category, there are three sub-categories; tsunami and earthquake; multihazard with Tsunami and Earthquake content; and Other Hazard.

Institutions or Organizations are sorted into Government; International Institution; non-governmental organizations (NGO); and International-NGO.

All materials have brief description, specification, year published, target audience, size and number of pages, languages, and the format available.

How to find a material. First, search for the category; look at the bottom of the page to find the region and sub categories. Then look at the title of the materials you are interested in.

The institution contacts are enclosed in the last chapter.

Book

Panduan Informasi Peringatan Dini Tsunami Bagi Lembaga Penyiaran di Indonesia

Description:

This book is to help broadcast media and newscaster to better understand the format and content of the tsunami early warning messages issued by BMKG. This guideline not only gives the understanding of the level of the warning, the flow of broadcasting and decision making process, but also provides information on experts at the national and local level that can be contacted / consulted as resource person in providing better and more accurate information on the related disaster.

Panduan Pelaksanaan Latihan Penyelamatan Diri dari Gempa Bumi & Tsunami Untuk Sekolah

Description:

This book is to provide guidance for schools on how to prepare and organize an evacuation exercise. This book guides headmasters, school teachers, administration and students on what to do when an earthquake occurs while in the classroom; what to do if the earthquake generates a tsunami in the ocean; identifying evacuation places in schools as well as outside of schools. This guideline also assists schools in developing disaster management teams in schools as well as steps in developing scenarios for organizing and implementing earthquake and tsunami exercises.

Bertahan dari Gempa Bumi dan Tsunami

Description:

This book provides the readers with better understanding on the characteristic of tsunamis in Indonesia; the level of vulnerability on tsunami hazard; information on tsunami early warning both natural warning and the warning system that has been established in Indonesia; and practical guides that can be applied to reduce disaster risks caused by earthquake and tsunami. This book is intended for students, media, disaster risk reduction practitioner, and community in general.

Cerita Dari Aceh, Membangun Kapasitas dan Sekolah Siagabencana

Description:

This booklet is a collection of a series of dreams, stories and impressions, and restlessness, in transferring knowledge and skills to other organization to do capacity building in School Disaster Preparedness.

The objective of this booklet is to share lesson learnt on preparedness activities undertaken by Tsunami Disaster Mitigation and Research Center (TDMRC) in the three schools: Elementary School 2 Banda Aceh, Junior High School 1 Banda Aceh and High School 1 Banda Aceh.

Specification:

Number of pages:

Merintis Masyarakat Siaga Bencana

Description:

This booklet guides the reader on importance community preparedness in multi hazard disasters especially earthquake and tsunami.

The first chapter, explained about awareness and importance of preparedness. The second chapter, explained about methods and participatory rural appraisal techniques. The third chapter explained about mapping hazards, vulnerability, capacity, and disaster risk. The fourth chapter explained about known capacity of the community, policy and community preparedness, and disaster management of the village such as, early warning, first aid, rescue and evacuation, security, and logistics (tent, stoves and barn). The last chapter explained about evacuation, pre simulation, simulation, and flow chart of the simulation scenario.

Cerita dari Maumere, Membangun Sekolah Siaga Bencana**Description:**

This booklet provides lessons learnt on developing School-based disaster preparedness focuses on earthquake and tsunami based on disaster preparedness model in three schools in Maumere. this booklet explained how to develop school preparedness based on five parameters and the standards to be achieved.

School-based disaster preparedness (Sekolah Siaga Bencana – SSB) is a model developed by the Indonesian Institute of Science (LIPI) and UNESCO office Jakarta based on the ISDR supported project in 2006 on Assessment Tools for Tsunami and Earthquake Preparedness in Indonesia. The SSB programme supports schools in building their capacity based on five parameters knowledge and attitude, school policy, emergency planning, school early warning system, and school's resource mobilization capacity. This model has been implemented in Muko-muko, Bengkulu Province in 2007 and in several areas in Indonesia. In February 2009, UNESCO and LIPI implement another pilot study in Maumere, Sikka province.

Using five parameters for disaster preparedness has proven to be one of the best practices to measure the state of preparedness of a school (this tool can also be use to measure the preparedness state of a community, city, district, as well as individual). Conducting preliminary study and observation using these five parameters will provide basic information on the kind of intervention needed to be done, what to focus on, the target sets as milestone to increase the schools disaster preparedness. In Maumere, UNESCO-LIPI worked on three schools appointed by the Sikka district Education, Youth and Sports Department. The three schools selected were: SDN Waioti, SMP 1, and SMA1 representing different level of formal education: elementary school; junior high school; and senior high school.

55 teachers from 14 other schools in addition to 167 teachers from these three selected schools, 800 high school students, 608 junior high school students, and 300 elementary school students participated in this school-based disaster preparedness program that consist of: 1). Teacher's training and schools's technical assistances to build school preparedness and Standard Operating Procedures; 2). Children Science Support – on disaster preparedness; 3). School's simulation; 4). First aid skills (on cooperation with Sikka's Red Cross); and 5). Evaluation post assistances. One of the good lessons learned as the outcome of this program, the students who was trained to be the agent of change continued to maintain this school-based disaster preparedness activity by forming an intra school student disaster management organization FORSIGANA (Forum of Student Disaster Preparedness) in Maumere. These students are still active and received supports from the Sikka district Education, Youth and Sports Department and the District Disaster Management Agency

Panduan Penyusunan Kontijensi Planing & Protap Kesiapsiagaan Bencana Gempa Bumi dan Tsunami

Description:

This booklet explain standard operational procedures (SOPs) on disaster mitigation at school level, community and government, as well as what need to be prepare in three phases: before, during and after the disasters. This is a practical guide in the development of disaster recovery procedures.

This booklet consist of six chapters. The first chapter is about preparedness at the household, school, and apparatus/government. The second chapter is about disaster management in Indonesia, such as: policy and strategy, prevention and mitigation steps (active mitigation, passive mitigation, effective disaster mitigation and community-based disaster mitigation). Management of disaster risk reduction approach (such as : concept of risk reduction, hazards, vulnerability and disaster risk) is also covered in this chapter.

The third chapter is about disaster management SOP at district/municipal level, such as Operation Control Center (Rupusdalops), Command Center Field (Rupuskodal), Assistant Command Post (Posko Bantu), early warning system, logistic system and emergency response.

The fourth chapter is about school preparedness and SOP, covering the objectives and targets, principle of school procedures, emergency response procedures, and school-based recovery.

The fifth chapter is about community preparedness. This chapter covers the procedures at house hold level as well as at community level.

The last chapter is about synchronization of all level, school, community and government.

Kajian Kesiapsiagaan Masyarakat Dalam Mengantisipasi Bencana Gempa Bumi & Tsunami di Indonesia

Description:

This book is about a study of earthquake and tsunami disaster focusing on community preparedness. This book consists of four chapters as the main topic of discussion. In addition there are information on introductory, conclusions and recommendations.

Chapter one discuss the framework to assess community preparedness to natural disasters. This chapter explains the concept of community preparedness, the development process framework, and the key stakeholders in community preparedness.

The second chapter is about the study of community preparedness. This chapter discuss the methods of data collection, processing, data analysis, the use of the instrument such as questionnaire, sampling location and the respondent, as well as field activities such as workshops and focus group discussions.

The third chapter cover the results of several studies in rural Aceh Besar district, the city of Bengkulu and Padang city.

Chapter four explain initiatives to meet the needs of community preparedness.

Benteng Alam Tsunami

Description:

This book is about managing coastal-based disaster and to increase public awareness on the importance of protecting the environment to reduce the level of damage caused by tsunami. There are four chapters. The first chapter explained about coastal ecosystem in disaster mitigation, overview of coastal ecosystems (rocky beaches, sandy beaches and muddy beaches), mangrove ecosystems and coral reef ecosystems.

The second chapter is about the importance coastal ecosystems, why it is important? the function of coastal ecosystems in disaster mitigation, lesson learnt from regional tsunami survivors, and coastal ecosystem interactions.

The third chapter is about community effort in building tsunami natural fortress. Covering education for to sake of coastal ecosystems sustainability, community action to build tsunami natural fortress (such as: coastal forest rehabilitation, and coral reef transplantation), and the spatial structure of coastal areas (such as: establish conservation areas in disaster prone areas, develop of tsunami disaster management, and planning to develop coastal areas).

The fourth chapter is about the benefit of coastal ecosystem as tsunami natural fortress, including the benefit for knowledge and education, tourism, community welfare and disaster risk reduction.

Where the First Wave Arrives in Minutes
Indonesian Lessons on Surviving Tsunami Near Their Sources

Where the First Wave Arrives in Minutes, Indonesian Lessons on Surviving Tsunami Near Their Sources

Description:

This booklet draws survival lessons from eyewitness accounts of two such tsunamis in Indonesia. The booklet is intended for people who live, work, or vacation on shores where fast-arriving tsunamis may strike. Such shores border parts of all the world's oceans and account for most tsunami deaths worldwide.

This book supersedes "Surviving a tsunami - lessons from Aceh and southern Java, Indonesia," 2009. Based on "Selamat dari bencana tsunami," 2009 (IOC Brochure 2009-1)

Humanitarian Forum Indonesia

Serangan Si Bencana

Description:

This Guidebook is guidelines that provides how to develop dan arrange strategies for improving community endurance in disaster risk reduction in operational scale that arranged as simple as possible for using in stakeholder. The book aim is to provide guide for a region in district level for Disaster Risk Reduction, measurable and structured based on HFA and UU No.24/2007 about Disaster Management. Development of the book use participatively method that facilitated by KOGAMI and supported by UNESCO and ISDR and involve stakeholders from community, government, school, and Non Government Organization (NGO). The book divide community endurance criteria based on HFA indicator into five priorities. each indicator divided into five community endurance level. First level is the lowest endurance level and the Fifth level is the highest endurance level.

Based on basic endurance criteria, participatively arranged a method for measuring region community endurance level through depth interview method. Interview implemented on community of government, NGO, mass media, private sector, academic, community leader, religion leader, and others communities which each community minimal 5 respondents.

Development of Disaster Risk Reduction Strategy in a region community implemented by stakeholders in a Focus Group Discussion (FGD) by step:

1. Determine present community endurance level; 2. Determine desired endurance level; 3. Discuss effort or main activity for implementation.

The last phase is developing a model in Padang City. Many efforts conducted by KOGAMI and Padang Government for implementation Disaster Risk Reduction Practical in every level in government, community and school. There are several phases in Development a Disaster Risk Reduction Model in Padang City and hopeFully this phases can be implemented and replicated in other cities/ districts.

Menyusun Serpihan Cermin Retak

Description:

“Menyusun Serpihan Cermin Retak: Melihat dari Dekat Penanganan Bencana Alam di Aceh dan Nias”. This book provides a close disaster management and responses in Aceh and Nias including the culture background of the community. Generally the stories parted into two topics: Aceh and Nias pre and post reconstruction. The interesting of this book is that the stories were written by the humantiarian volunteers working in Aceh and Nias based on their interaction with the affected community.

Panduan Pelaksanaan Masyarakat Sadar Tsunami

Description:

The training approach named DarMi or Sadar Tsunami (Tsunami Aware) consists of three types of training modules:

1. The first module, "Community Event", is a simple module used by local facilitators to conduct community event. The module contain steps how to conduct community event started from preparation up tp implementation; the topic of discussion with the community i.e. knowledge on tsunami hazard, warning chain, how to react, knowing my area or introduction on evacuation plan. The module also includes materials and tool kits needed.
2. The second module, "Training of Facilitator (ToF)", used by master trainers to train local facilitators. The module contains in-depths information on principles of disaster management, earthquake and tsunami hazard, InaTEWS, warning chain, evacuation planning and adult learning methods. It also describes how to plan and to deliver community events.
3. The third module, "Training of Trainer (ToT)", is a most advanced module used by GTZ International Services-IS and PREMAnet team to prepare a group of master trainers who were expected to train local facilitators to implement community awareness activities in the pilot areas. The master trainers had been selected from partner organizations and working groups in the pilot areas. The Content of the module is similar to the second module. The difference is basically on level of in-depth discussion and technical explanation to meet the competences required by master trainers

DAPS (Disaster Awareness in Primary School)

Description:

The DAPS (Disaster Awareness in Primary School) Topic of Tsunami consists of 5 modules that are Concept of disaster (Module), Tsunami hazard and tsunami early warning (module 2), evacuation planning process for school (module 3), how to survive during a tsunami (module 4), first aid procedures and equipment (module 5). Module 1 and 5 were developed by the SEQIP team, while module 2, 3, and 4 were developed by the project team. The target of the module is primary school teachers who are later will explain to their student trough certain curricula. The modules will be updated regularly in according to the implementation process of the Indonesian Tsunami Early Warning System (InaTEWS) that is still ongoing.

Ayo Siaga Bencana, Palang Merah Remaja Wira

Description:

This book explains various types of disasters in Indonesia such as earthquakes, flooding, tsunami, landslides, fires, drought, strong winds, volcano eruptions, sea erosion, climate change and conflict. Understanding disasters and their impact is important so that the Red Cross youth in senior high school can conduct disaster preparedness and risk reduction measures in accordance with their skills learned at their school, in the family and the community.

Youth Red Cross Youth is PMI's backbone in doing humanitarian activities in the field such as health care services and disaster preparedness, promoting the Fundamental Principles of the International Red Cross and Red Crescent Movements, and including developing PMI organisation capacity.

The development of Youth Red Cross aims:

(1) to strengthen the quality of the character building, (2) to be role models in maintaining a healthy life to their peer groups, (3) to motivate their peer group to maintain a healthy life, (4) to act as peer educators, and (5) to become future volunteers corps.

The PMI core activities are based on the Tri Bhakti (Three Services) of Youth Red Cross which comprise of: (1) Increase the knowledge of healthy living; (2) Dedicating and serving the community and (3) Establishing and maintaining national and international friendship.

Ayo Siaga Bencana, Palang Merah Remaja Muda

Description:

This book explains various types of disasters in Indonesia such as earthquakes, flooding, tsunami, landslides, fires, drought, strong winds, volcano eruptions, sea erosion, climate change and conflict. Understanding disasters and their impact is important so that the Red Cross youth in junior high school can conduct disaster preparedness and risk reduction measures in accordance with their skills learned at their school, in the family and the community.

Youth Red Cross Youth is PMI's backbone in doing humanitarian activities in the field such as health care services and disaster preparedness, promoting the Fundamental Principles of the International Red Cross and Red Crescent Movements, and including developing PMI organisation capacity.

The development of Youth Red Cross aims: (1) to strengthen the quality of the character building, (2) to be role models in maintaining a healthy life to their peer groups, (3) to motivate their peer group to maintain a healthy life, (4) to act as peer educators, and (5) to become future volunteers corps.

The PMI core activities are based on the Tri Bhakti (Three Services) of Youth Red Cross which comprise of: (1) Increase the knowledge of healthy living; (2) Dedicating and serving the community and (3) Establishing and maintaining national and international friendship.

Buku Panduan dan Perangkat Penilaian Paska Bencana untuk Sektor Pendidikan

Description:

Post Disaster Assessment System for Education Sector (PDASES) is an integrated assessment system within the education structure/management system (both at the national and district levels) that can quickly and easily provide comprehensive information related to damages in the education sector caused by a disaster. This tool is divided into three key stages for damage assessment. In each stage, there are different aspects that are specifically tailored to the needs of basic provision according to the condition/stage:

- 1) Rapid assessment phase: in this stage, the data collected provides the general physical damages and information on meeting the education needs during an emergency period;
- 2) Early Recovery Phase: in this stage, the information disclosed and related to school operations and improvement will be clearer and detailed; and
- 3) Rehabilitation and Reconstruction Phase: this stage is a step to verify the data previously reported, in order to determine the assistance given is in accordance with the national education standard.

Program Kesiapan Sekolah Terhadap Bahaya Gempa

Description:

This is an education package for schools on earthquake education “Earthquake Preparedness Program for School. The package contains three books targeted teachers and students of elementary school. Although the main focus of this book is earthquake, it can also consider for other hazard such as flood, tsunamis, fires, etc.

The education package supports the Life Skills Education Programme aims to provide students with the knowledge, attitude and skills.

The first book is designed for the teachers, principals, and instructors as a reference to the other two books. The book contains of modules to improve knowledge on earthquake and its impact to buildings, school facilities and environment. The book also helps teachers to motivate students in practicing for earthquake disasters through fun, attractive, and dynamic measures.

The 2nd book contains Learning Materials for Teachers specifically for grade 4 to 6. Materials covers in this book are: introduction to earthquake disasters; vulnerability and capacity identification; risks of earthquake disaster; earthquake effects to buildings; safety measures; introduction to effects of earthquake on people, objects, and city facilities; dealing with negative feelings of post-earthquake; introduction to rescue actions; earthquake preparedness; earthquake risks management; and program evaluation.

The 3rd book is Worksheet for Students. Manual to help teachers in teaching the students on the dangers of earthquakes. The worksheets materials are developed in a fun and attractive way to work on through exercises, experiments, and simulations.

The book was developed based on the inputs from other earthquake-prone countries such as the United States, Japan, Iran, India, and Nepal.

Aha, Sekarang Aku Tahu

Description:

This is a teachers' guidebook for how to teach emergency preparedness to children in regular primary schools. The book is based on ASB's original teaching aids with more detailed explanation for teachers. A valuable addition is the compilation of frequently asked questions from teachers and children which ASB has collected during our first-hand training experiences.

Aha, Sekarang Aku Bisa

Description:

This is a teacher's guidebook on how to teach emergency preparedness to children with disabilities, for instance children with hearing and visual impairments, intellectual and mobility difficulties, etc. These children need special teaching-learning methods based on their needs. Therefore, this book provides practical tips for teachers and parents in order to teach emergency preparedness to children with disabilities. Besides providing information on teaching-learning methods for children with disabilities, this book also lays out practical safety tips for these children in the event of disasters. Thus, this book helps teachers (especially inclusive and special school teachers) to better assist children with disabilities in the event of disasters.

Kesiapsiagaan Menghadapi Bencana di Lingkungan Sekolah

Description:

This book is part of the guideline books series for Teachers/Pesantren (Islamic Boarding School) Teachers in teaching Disaster Management through multi hazard approach which purpose is to upgrade students' knowledge, skill and preparedness in facing various disasters.

Having been used to train 45 Madrasah / Pesantren teachers at 3 areas, which are West Jakarta, Magelang (Central Java) and Jember (East Java), the teachers were asked to put into practice their knowledge to students/santri (term for Madrasah / Pesantren students) in 5 Madrasah (Islamic School) / Pesantren based on the experience in the trainings that located in those 3 areas mention above.

Besides inviting teachers to identify various kind of disasters, how to deal with it individually and collectively, this book also explains some important steps that has to be put into note seriously by students in pre disaster condition, when disaster strikes and in post disaster situation, such as earthquake. Basically, teachers and students' safety is determined by appropriate steps that should be taken when disaster happens and how to build a coordination process in doing disaster management efforts collectively. Therefore, school as an institution must have a School Action Planning in dealing with disaster which has to be socialized well. Other important thing is to analyze school physical vulnerability, whether the infrastructure and soft side (such as knowledge, skill) of the school are safe or not, and what strategic plan that has created in upgrading the physical and soft side capacity as a safe school.

This books are printed by the support of UN OCHA in campaigning Disaster Risk Reduction at schools / madrasah on 2008.

CBDRM - NU

Penanggulangan Bencana Berbasis Masyarakat dakan Perspektif Islam

Description:

This book is used for Moslem community who seeks for theological basis of Community Based Disaster Risk Reduction (DRR) efforts. CBDRM NU (Community Based Disaster Risk Management – Nahdlatul Ulama) uses this book as a guide for trainers / facilitators and related communities who work on DRR issue through the Islamic point of view.

In explaining disaster aspect, this book uses the multi hazard approach and its basic information such as the cause, effect and emergency response, in order to raise the awareness of the community on the importance of doing DRR efforts or reducing loss and victims that might be caused by disaster.

This book which begun with the current condition that shows the intense of disaster in the world that is increasing puts Indonesia as one of the country where the frequency and intensity of the disaster is increasing every year. The Islamic point of view in regarding to disaster was pictured in this book as well where readers could find it in the part which mention that in fact in Islam teachings there are lots of guidelines that encourage Islam community to do any efforts to reduce the risk of disaster. Specifically this book also gives explanation on how Islam Ahlus Sunnah wal Jama'ah perspective in disaster management and describes the experience and strategy of NU related to disaster management through an empowering process by doing identification, risk, vulnerable, capacity and hazard analysis in participative way.

This book is printed by the support of AusAID as part of Pesantren Based Disaster Risk Reduction in NU community. This program has succesFully done in 3 pilot areas, which are Pesantre Assidiqiyah (West Jakarta), Pesantren Darussalam (Magelang, Central Java) and Nurul Islam (Jember, East Java) since 2007 to 2010.

Modul dan Pelatihan Penanggulangan Bencana Berbasis Masyarakat

Description:

This material consists of two (2) books that printed separately but actually completing one another. They are Module and Handout Book which explain the goal, method and substance in community assistance process related to DRR (Disaster Risk Reduction) issue in more detail. Besides that, the preparedness steps and stages in starting a training also explained sistematically. This was intended to maximize the effectiveness of the training.

This book, specifically, was prepared as an asset for Disaster Management Facilitators when they facilitate communities or doing assistance in DRR issue participatively. Being divided into 2 parts which are Module as the first material that consist of explanation on technics and “how to” topics in facilitating and organizing community, while Handout as the second material was consist of substance that can be used as materials in assisting community on DRR issue.

This book has implemented by CBDRM NU by using Pesantren based in assisting community in West Jakarta, Magelang (Central Java) and Jember (East Java). The users are santri (term for Pesantren students) that has participated in Training of Facilitators in 3 Pesantrens, which names are Pesantren Assidiqiyah (West Jakarta), Pesantren Darussalam (Magelang, Central Java) and Nurul Islam (Jember, East Java). After the training, the participants implement their knowledge in 5 sub districts and in each sub districts the participant chooses 1 most vulnerable village. In this village, the santris tried to socialize a DRR issue to a group of 25 persons and did a mapping and hazard, vulnerable and risk analyzes collectively. Then, with the community altogether planned and set a risk reduction steps and compose a collective action planning as the implementation step.

This book is printed by the support of AusAID as part of Pesantren Based Disaster Risk Reduction in NU community. This program has succesFully done in 3 pilot areas, which are Pesantre Assidiqiyah (West Jakarta), Pesantren Darussalam (Magelang, Central Java) and Nurul Islam (Jember, East Java) since 2007 to 2010.

Modul Ajar Pengintegrasian Pengurangan Risiko Bencana

Description:

These publications “Modul Ajar Pengintegrasian Pengurangan Risiko Bencana” (Teaching Module on Integrating Disaster Risk Reduction) are produced as the result of collaboration between Curriculum Center, Research & Development Office, Ministry of National Education, the Government of Indonesia with Safer Communities through Disaster Risk Reduction (SCDRR) Project. These publications are aimed to provide guidance and/or reference for school teachers in integrating DRR into school curricula (school subject, local content and extra curricula). Generally these publications consist of 15 books, which cover 5 types of hazards (Tsunami, Earthquake, Flood, Landslide and Domestic Fire) for 3 levels of education unit (elementary school, junior school & high school).

Each teaching module describes the type of hazard and its cause, what should be done when a disaster happens and after a disaster occurs. The framework of DRR Education and The Concept of Disaster Risk Reduction also describes an introduction so teachers could be able to understand the whole picture of the “Road Map on DRR Education”. While the main content of these modules is described in chapter IV and V of each module, explaining the step-by-step in integrating those knowledge on DRR into school curricula, from identifying DRR-related subjects, analysis of syllabus and subject indicators, developing lesson plans in various school subjects, to developing samples of learning materials. It is expected that these modules could be a reference/guidance for school teachers in organizing/developing teaching materials which integrate disaster risk reduction into the learning process.

Risk Assessment Training Module : a guideline for Facilitator

Description:

This training module is designed for facilitators of the disaster Risk Reduction program. Risk assessment for hazard, vulnerability, capacity assessment (HVCA) is one of the tools in the DRR program used to identify the characteristics of a community, existing vulnerabilities, and steps that can be carried out to reduce the vulnerabilities and strengthen disaster prevention.

This modul is also one of the tools employed for the fulfillment of children's rights to protection against disaster and can also be used to increase children's participation, in which the facilitators play a role to trigger discussion and facilitate consensus among participants rather than explaining and directing the participants.

Be Alert for Disasters

Description:

This Manual is the English version of PMI's book "Ayo Siaga Mula". "Be Alert for Disasters!" is intended for the members of Red Cross Youth (RCY) at Elementary School. It contains information about the type of disasters that often occur in Indonesia, for example disasters that claim many lives such as the earthquake and tsunami; and disasters that occur slowly such as erosion and drought. Climate change and conflicts are included to provide a basic understanding and recognition.

Pengintegrasian Kesiapsiagaan Bencana ke Dalam Mata Pelajaran Sekolah Dasar

Description:

This publication “Integrating Disaster Preparedness into Elementary School Subjects (with samples of lessons plan)” is produced as the result of collaboration between Curriculum Centre, Research and Development Office, Ministry of National Education, Government of Indonesia with Save the Children.

Preparing the citizen in dealing with disaster risk is not only in terms of providing knowledge and understanding before the disaster happens, but also in form of providing knowledge and skill to deal with the disaster when it happens and what should be done after the disaster occurred. Every citizen must be ready before the disaster happens, know what they need to do while disaster happens and after the disaster occurred.

Teaching material with disaster preparedness integrated in it as an operational reference in implementing education in school is an influential component in providing knowledge and understanding about disaster for citizen, especially students. The teaching material, which is organized based on thematic and subject based learning, can be integrated within learning process. Issues related to the types of disaster and its cause, the attempts that can be created to avoid disaster, what should be done when disaster happens, the impacts of disaster, the attempts to minimize the impact of disaster, and what should be done after a disaster occurred can be integrated by teacher while implementing the relevant curriculum, especially through learning process.

Based on that objective, Curriculum Centre in collaboration with Save the Children developed samples of lessons plan on integrating disaster preparedness into elementary school subjects. These samples of lessons plan are expected to be a reference for teacher in Indonesian schools in organizing teaching material, which integrates disaster and disaster preparedness issue into learning process.

Generally, this teaching material model about disaster and disaster preparedness is published in 6 (six) books, which are:

1. Thematic Teaching Material Model about Disaster and Disaster Preparedness for 1st Grade of Elementary School
2. Thematic Teaching Material Model about Disaster and Disaster Preparedness for 2nd Grade of Elementary School
3. Thematic Teaching Material Model about Disaster and Disaster Preparedness for 3rd Grade of Elementary School
4. Teaching Material Model about Disaster and Disaster Preparedness for 4th Grade of Elementary School
5. Teaching Material Model about Disaster and Disaster Preparedness for 5th Grade of Elementary School
6. Teaching Material Model about Disaster and Disaster Preparedness for 6th Grade of Elementary School

Save The Children

Pedoman Pelatihan PRB yang dimotori oleh Anak - Anak di Sekolah dan Komunitas

Description:

This training manual, Child-Led Disaster Risk Reduction in Schools and Communities, is produced by Save the Children based on the experience of the pilot project in tsunami affected provinces in southern Thailand as a guide for organising activities to strengthen children's capacity in disaster risk reduction in schools and communities. This manual aims to promote leadership by children and young people in planning, analysing and conducting disaster risk reduction activities. This training manual, Child-Led Disaster Risk Reduction in Schools and Communities, is produced by Save the Children Sweden and Save the Children UK, and later Save the Children US in Indonesian language as a guide for organizing activities to strengthen children's capacity in disaster risk reduction in schools and communities.

Save the Children produced this training manual using a process developed by Marta Casamort Ejarque (DRM Project Co-ordinator and Consultant) for a disaster risk-reduction project, Listening to the Water, operated by Save the Children UK in Cuba. The first draft of this manual was refined as a result of two disaster risk-reduction training workshops for youth trainers in August and September 2006. The project partners, Rabatbai Group, Duang Prateep Foundation, the Asian Resource Foundation and the Youth Network for Development, then used the draft manual in their work with children in southern provinces of Thailand. In January 2007, Save the Children and its partners revised the manual again. The outcome is the training manual before you now.

From Save the Children's experience in 2006, children's participation in conducting disaster risk-reduction activities in their communities shows clearly that children not only are 'victims' of disasters but are capable citizens who, with proper and sufficient support from adults, can truly participate in activities that are beneficial to their societies.

This manual aims to promote leadership by children and young people in planning, analyzing and conducting disaster risk-reduction activities by providing training on the following topics.

- Concepts and definitions relating to disaster risk reduction.
- Risk and resource community mapping.
- An educational campaign on disaster risk reduction.

Child-led Disaster Risk Reduction, A Practical Guide

Description:

This publication is produced as the result of collaboration between Save the Children Sweden, Save the Children UK and Save the Children US.

Following the Asian tsunami of 2004 Save the Children made Child-Led Disaster Risk Reduction (CLDRR) one of their key priorities in reconstruction and the policy of improving what existed prior to the disaster. This led to the first workshop in Hanoi in June 2006, which brought together practitioners from across the region to work on a common CLDRR definition and framework. Save the Children held a follow up workshop in Agra in December 2006, which cemented these ideas and allowed for the drafting of a common framework and process of implementing CLDRR. The framework precedes the program guide and forms the structure of this guide – each sub component is listed, explained and working examples given from programs around the region. The framework is a guideline and should not necessarily be followed sequentially – several of the components should ideally run simultaneously. There is a logical progression throughout, but it is important to tailor the framework to specific circumstances.

Aksesibilitas Fisik

Description:

This book provides a guide for designing physical accessibility for all. It is based on ASB's experience of working closely with inclusive schools in Yogyakarta Province. This book offers unique and cost effective alternative designs accessible for not only people with disabilities but also for everyone in order to promote inclusion. The designs in this book are mostly for schools. However, this book can be used as a guide to design physical accessibility for most places in order to widen and improve access for people with disabilities.

Panduan Mengajar Lingkungan Hidup dan Kesiapsiagaan Bencana untuk Sekolah Dasar

Description:

This complete 290-page primary level (Indonesian classes 4/5/6) teacher's handbook provides educators with background information for designing dynamic lesson plans for in-class and outdoor education activities. The manual provides detailed lessons, photocopy-able activities and resources, as well as fun activities that function as lesson evaluations for keeping track of student comprehension of the materials delivered.

The handbook is divided into the following three sections:

1. My sustainable environment: Increases understanding of how our actions affect the environment with activities that teach how to become stewards for the environment
2. My healthy environment: Looks at how we can work with our environment to develop and maintain healthy lifestyles
3. My safe environment: Covers the principles and practices of disaster preparedness for local schools including a range of hands-on student's activities.

Kita Siap Hadapi Gempa dan Tsunami

Description:

Sihaben and Marista received a letter from their friend Taben from Suka Siaga Village. In his letter Taben reflected on the tsunami that happened 2 years ago. The community suffered many losses, and many houses and public facilities were damaged causing thousands of dead and injured people.

According to Taben, this was all due to the ignorance of the people to earthquakes and tsunamis. In his letter Taben further explained what people should do before, at the time and after an earthquake and tsunami, so that we are all prepared to face earthquakes and tsunamis.

Tsunami

Description:

The story revolves around a student named Tina and her grandmother who had first-hand experience of the August 1976 Moro Gulf Earthquake and Tsunami in Mindanao, Southern Philippines. As tsunami is the topic of discussion in her class her grandmother shared with her the experiences of a survivor. Tina's class takes a tour at the PHIVOLCS facilities where they were oriented about how tsunamis are formed, and what can be done to avoid being affected by it- by knowing and understanding the natural signs of an approaching tsunami.

Data dan Informasi Bencana Indonesia

Description:

This booklet provides lesson learnt from Data dan Informasi Bencana Indonesia (DIBI) or Indonesian Disaster Data and Information Management Database that is developed using the DesInventar and DesConsultar software and methodology and implemented at national and provincial level, particularly in the provinces of SCDRR Project (DI Yogyakarta, Central Sulawesi, East Nusa Tenggara, Bengkulu, and West Sumatera) and Aceh.

The DesInventar software is one of the very few existing proven methodologies for building disaster information management systems allowing the homogeneous capture, analysis and graphic representation of information on disaster occurrences and losses. Currently, the data available online in DIBI is based on official government data for the years 1997-2007 while trying to collect data on disaster that have occurred over the past 30 years at provincial level in an agreed format.

After establishing, DIBI has been used for many purposes such as for risk analysis in risk map formulation, academia for researches, insurance, etc. This publication is an attempt to reveal the experience along with lesson learned to become a reference for practitioners, development professionals, insurance agencies, as well as government agencies in order to foster DRR initiatives in Indonesia.

Lessons Learned: Indonesia's Partnership for Disaster Risk Reduction

Description:

This booklet provides lesson learnt from Indonesia's Partnership for Disaster Risk Reduction (DRR). Partnerships in Disaster Management have been the cornerstone of the New Disaster Management Law in Indonesia, founded on the solid collegial bonds built out of the tragedy of disaster response. A variety of fora and partnership had already been established as the precursor to National Platform included United Nations Technical Working Group (UNTWG), the Convergence Group, the Consortium for Disaster Education (CDE), Community Based Disaster Risk Management (CBDRM), Forum University (later formalized at the Forum PT), media and private sector.

These partnerships have been both personal and institutional networks which have come up with the evolution of the National Platform for DRR (Planas PRB) and the Forum PT as a partnership of tertiary and research institution. National Platform is a multi-stakeholder body to advocate for DRR at different levels and provides coordination, analysis, and advice on areas of priority requiring concerted action through coordinated and participatory processes. In addition Planas PRB provides a forum for coordination of and integration of DRR into Indonesian development planning and bridges civil societies, academia, the international community and the government of Indonesia.

This booklet also explains other thematic forums focusing on particular regional hazards as well as emphasize that Planas PRB should find the appropriate strategies to engage different stakeholders to the target. This publication is an attempt to reveal the experience of partnership in DRR along with lesson learned to become a reference for practitioners, development professionals, as well as government agencies in order to foster DRR initiatives in Indonesia.

2011 Lessons Learned: Supporting The Evolution of Sub-National Forum for Disaster Risk Reduction

Description:

This booklet provides lesson learnt from the supporting the evolution of sub-national forum for disaster risk reduction in SCDRR Project areas that are DI Yogyakarta, Palu City, East Nusa Tenggara, Bengkulu, West Central Java and West Sumatera. Establishment of a forum is an integral part of DRR program at sub-national, national and international level which are the common responsibility shared by with all stakeholders as mandated by the Hyogo Framework for Action (HFA) 2005-2015 in one of its priorities which is to ensure that disaster risk reduction is a national and a local priority with a strong institutional basis for implementation.

This lesson learned has been written to describe the process of sub-national DRR Forum establishment with the dynamics and uniqueness in each establishment place. Many things have been learned as a lesson, particularly in the effort to embrace stakeholders to involve in DRR Forum that in actual is not an easy job to do. Loose commitment within forum, lack of financial support, management issues are some of challenges faced by DRR Forum for its sustainability. In addition the contribution of private sector remains weak owing to poor the socialization of DRR Forum.

This lesson learned booklet is intended for Disaster Management (DM) and Disaster Risk Reduction (DRR) practitioners, development professionals, government agencies as a reference on the experiences in Indonesia fostering the development of National Platforms for DRR and sub-national Forum for DRR.

Strategy for Mainstreaming DRR in Schools

Description:

This booklet provides a copy of Ministerial Decree or Surat Edaran MENDIKNAS No. 70a/MPN/SE/2010 on Mainstreaming Disaster Risk Reduction in Schools. It is a national policy that served as reference and guidance to mainstream DRR into school education system, which includes policy, strategic framework, planning, institutional structure, facilities and infrastructures, implementation of learning on participants. This publication is produced as the result of collaboration between the Directorate General of Secondary & Elementary Education of Ministry of National Education with Safer Communities through Disaster Risk Reduction (SCDRR) Project.

Attached to the decree is the strategy that outlined the following important subject in mainstreaming DRR in schools:

1. Strategy Concept.
2. Strategy for Mainstreaming DRR in Schools
3. Strategy Implementation
4. Monitoring & Evaluation of Strategy Implementation.

2011 Lessons Learned: Supporting the Mainstreaming of DRR in The Education System in Indonesia & Pilot Projects for Safer School (SSB)

Description:

This booklet provides lesson learnt from mainstreaming DRR in the education system in Indonesia and the implementation of school preparedness program (Safer School) of SCARR that implemented by its partners in 3 location: District of Bantul, DI Yogyakarta Province; City of Bengkulu, Bengkulu Province and City of Palu, Central Sulawesi Province in Indonesia.

The strategy for mainstreaming disaster risk reduction in schools that issued by the Minister of National Education in the form of Ministerial Decree or Surat Edaran MENDIKNAS No. 70a/MPN/SE/2010, is a national validation, reference and guidance to mainstream DRR into school education system, which includes policy, strategic framework, planning, institutional structure, facilities and infrastructures, implementation of learning on participants.

At the implementation level SCARR has been implemented the Safer School (SSB) pilot project in 3 locations mentioned above -conducted by its implementing partners- which most affected by flood, earthquake, landslide and tsunami. This publication is attempted to reveal the experience along with its lesson learnt to become a reference for practitioners, development professionals, as well as government agencies in order to foster DRR education initiatives in Indonesia.

2011 Lessons Learned: Building Safer Communities Through Pilot Projects for CBDRR

Description:

This booklet provides lesson learnt from SCDRR practice in Community Based Disaster Risk Reduction through variety of hazards, locations and partnerships. Difference approach and methodology have been developed as a reference on the experiences in Indonesia fostering the development of participatory strategies for engaging communities at the grassroots level on DRR and how the local context, culture, religion, and socio-economic dynamics influence the development of safer communities in particular areas.

The booklet consists of related elements: 1) a report detailing the rationale behind the CBDRR, summarizing the process, analyzing relevant literature and outlining the results of the assessments prepared during the process, include findings that contribute or relate specifically to the design, structure, or purpose of the CBDRR. 2) General approach developed by local implementing partners which details how to undertake the program including the 'tool' itself – a format used to collect, analyze and present information that leads the community to the identification of their risk, using three implementation pilot areas experiences – Palu City, DIY Province and Central Java. 3) Challenges faced by the local implementing partners and SCDRR with the pilot projects.

The purpose of the intervention described in the booklet is intended to model a participatory approach whereby, communities in partnership with local government can: identify hazards; assess risks; propose mitigation or reduction measures; and, feed DRR back into the local development planning process (Musrenbang). In what the Government of Indonesia (Gol) refers to as the: 'Disaster-Risk Sensitive Planning Process'.

This booklet attempts to reveal the experiences along with its lesson learnt to become a reference for communities, practitioners, development professionals, as well as government agencies in order to foster CBDRR initiatives in Indonesia.

Lessons Learned: Disaster Management Legal Reform

Description:

This publication of “Lesson Learned: Disaster Management Legal Reform, the Indonesian Experience” is produced by Safer Communities through Disaster Risk Reduction (SCDRR) Project supported by the United Nation Development Program (UNDP), AusAID and the Department for International Development –DFID. The aim of this publication is to provide information on the formulation of Disaster Management Law in Indonesia and provide lesson learnt for decision makers and general audiences. As efforts the coalition of NGOs, the draft of Disaster Management Law became officially parliament initiatives for further process in the Indonesian parliament. UNDP through Emergency Response and Transitional Recovery (ERTR) supported the process by putting technical assistance and its deliberation process. On 26 April 2007, Disaster Management Law was enacted, its recognizes the shift from focus on Disaster Response to Disaster Risk Reduction (DRR) while clearly identifying a systemic approach to disaster management across the three phases of the DM cycle. The law mandates the creation of National Disaster Management Agency (BNPB) who has authority to coordinate all activities during, pre and post disaster, while in the response phase, BNPB has the command and control of the coordinated responses of all actors.

Lesson learnt that can be taken from this books :

- (1) well established collaborative among actors contributed to the deliberation process of DM Law;
- (2) The DM reform in Indonesia occurred right time and right place, where Hyogo Framework for Action (HFA) 2005-2015 and United Nations International Strategy for Disaster Reduction (UNISDR) laid foundation for the national movement to shift from Emergency to DRR;
- (3) Openness and exhaustive consultation and coordination among practitioners and responders contributed to DM Law Reform;
- (4) The involvement and leadership of CSO of the advocacy was crucial of to is success.
- (5) Imperfect law passed at the right time has provided the basis for subsequent ancillary regulation that can be repaired and refined the law in its future implementation.

CARE

Description:

A 60 minute school based drama consisting of 4 separate stories of how to prepare for 4 different hazards (floods volcanoes, landslides, and whirlwinds). The drama is set up to be used in inclusive settings with students with different disabilities, together with non-disabled students. Indonesian Sign Language combined with American Sign Language is used; however subtitles and voice dubbing make it accessible for people without knowledge of sign language. This material assists teachers who have limited teaching capacity to teach deaf students. The drama is self-explanatory and easy to follow by all ages. A VCD player is required.

Description:

A 14 picture story covering simple and basic preparedness measures for floods including definitions, causes, signs, and preventive measures. In a similar manner to ASB's earthquake story cards there is a narrative text on the back of the pictures that helps teachers to present the story. Teachers can use it as a story sequence or stand-alone picture to reinforce their teaching without knowledge of sign language. This material assists teachers who have limited teaching capacity to teach deaf students. The drama is self-explanatory and easy to follow by all ages. A VCD player is required.

When Forests Disappear Disasters Happen

Description:

This striking poster's main image depicts one of IDEP Foundation / BAHARI's emergency response initiatives. It clearly demonstrates the direct relationship between unchecked illegal logging practices and the natural disasters that are common in Indonesia. It lists a series of key "do's" and "don'ts" as reminders of sustainable and un-sustainable community forest management practices appropriate to the region.

The Prepared Ones

Description:

The devastating tsunami on December 26, 2004 prompted government and civil society to reconsider their state of disaster preparedness. More than two years later, important and challenging questions have been raised on local and national levels. Are we really better prepared now? Are we mainly ready to respond after a disaster has struck? Or are we now thoroughly prepared to minimize the fatalities and damage that a future disaster may cause? Told from the perspective of disaster victim themselves, *The Prepared Ones*, tells the story of inspiring community-based efforts in the vicinity of Teluk Dalam, South Nias by reflecting on the lessons from past disasters and taking initiative towards a safer future. This documentary was produced in cooperation among UNESCO, UNDP, MPBI, Elsaka and DReAM UPN Yogyakarta in order to support community-based disaster reduction efforts in Indonesia and its neighboring countries.

Tsunami Teacher

Description:

TsunamiTeacher aims to build awareness and capacity to respond and mitigate the impact of tsunamis through the sharing of knowledge, research, and best practices. Materials are available that can be adapted to develop locally relevant responses. A feature of the Toolkit is the ability to customize training modules for different audiences.

Training Modules target the Media, Educational Systems, and the Public and Private Sectors, including governments, non-government organizations, businesses, and community groups. Within the government sector, a large amount of training material has been assembled on earthquake and tsunami science and research, tsunami events, and the building of tsunami warning and mitigation systems. These topics include hazard and risk assessment, operational warning and dissemination systems, tsunami emergency response, alerting, and preparedness, environmental, engineering mitigation and policy, and education and outreach. Resource materials are provided as examples and guidance for decision-makers.

TsunamiTeacher is supported both as a dynamic, electronic, on-line resource that will be continually reviewed, updated, and added to by experts, and as an off-line set of DVDs.

Rumah Aman Gempa

Description:

The Rumah Aman Gempa Resources DVD provides a means of easily supplying people with a complete set of all key 'Rumah Aman Gempa' materials in one disk. This DVD can be used by local facilitators to enhance the effectiveness of trainings and public awareness events about disaster management. Includes:

- A series of Rumah Aman Gempa talk shows
- Several related documentary videos
- A series of trainers' guidance about Rumah Aman Gempa construction
- Rumah Aman Gempa information Toolkit
- Rumah Aman Gempa construction manuals in PDF format
- A series of related campaigning tools
- Rumah Aman Gempa trainer's resources
- Information about Rumah Aman Gempa programs

A brief description of the contents of this disk

Facilitator's references and resources

Includes Panduan Membangun Rumah Tembokan Tahan Gempa, Panduan Memperbaiki Bangunan Sederhana yang Rusak Akibat Gempa, Poster bangunan tembokan bata tahan gempa, Poster bangunan papan kayu tahan gempa, Poster bangunan tembokan bata tahan gempa dengan perkuatan kayu, Flipchart Membangun dan Memperkuat Bangunan, Lesson Plan Training Rumah Aman Gempa, Paket Informasi Rumah Aman Gempa, and other documents related to earthquake safe houses.

All of the RAG films & radio tracks

Includes a wide range of educational and documentary films and talkshows that can be used to introduce key topics related to earthquake safe houses and community based disaster management.

RAG print media

Includes Rumah Aman Gempa information, manuals for earthquakes safe house constructions, disaster comics and posters related to earthquake safe house.

Articles

Articles related to Rumah Aman Gempa activities.

Some information about the RAG program strategies used

Membangun Budaya Siaga Bencana Di Kota Padang Melalui Pembangunan Komunitas Percontohan

Description:

This Video contains the documentary film about the developing process how to prepare the community in Padang city. The short film captures the process to engage people, government, school communities, and international institution in strengthening the preparedness activities through their own capacities. It explained about how to develop disaster prepared team, which has responsibility to increase the capacity of their communities either at village or school and how the agencies examine their readiness by holding evacuation drill. KOGAMI really hopes this simple method could motivate people in other prone areas to have similar action with the community in Padang city.

Ya'aga Siap Siaga

Description:

"Aneuk-aneuk Penyu - Hidup Bak Laot" - a movie (Little Turtles - They Live at the Sea) was produced as a documentation from tsunami survivors in Kuala Bubon, West Aceh since the first time after tsunami until they build their living place back on the same area that previously damaged by the tsunami to start new life. This documentation shows daily activities from Kuala Bubon villagers and supported with clear narration in Bahasa Indonesia, English, and Aceh.

This video set was produced by YAKKUM Emergency Unit (YEU), ACT-International, FINCHURCHAID, ELCA, EED, and LWR.

"Ya'aga Siap Siaga" - a disaster risk reduction training movie involving local people in Nias. The important information shares through this movie both the mock drill and the using of alternative tools for first aid help such as sandals that used as splint for neck bone injured.

Siapkah?

Description:

Information Package for Local Decision Maker To convince decision makers at the local and national level (government officers and parliamentarians) about the importance of developing local regulations and budgets for tsunami preparedness and early warning, a comprehensive information pack has been developed. The package includes a five-minute video clip, a CD and a brochure that provide basic information about the tsunami hazard and the early warning system, to raise awareness about the role of local governments in InaTEWS. The video clip is designed as a five-minute "wake-up call" targeting local policy and decision makers. The video emphasized the need for tsunami early warning and preparedness, and encouraged them to take a lead in promoting tsunami preparedness, as well as developing a plan to evacuate when a warning from BMKG comes. It also briefly explains about roles and responsibilities of each stakeholder in preparing and protecting their people for tsunami and earthquake.

Membangun Kesiapsiagaan & Latihan Penyelamatan Menghadapi Tsunami

Description:

GTZ IS-GITEWS and Java Partners have produced two sets of documentary videos for decision makers and organizations at village and district level, particularly in the project's pilot areas in Java. The first set is documentation of the Tsunami Drill in Bantul. The set consists of two videos: (1) the preparation, and (2) the implementation of the Tsunami Drill. The second set contains two documentation videos as well: (1) evacuation planning, and (2) socialization campaigns at grass root level. The duration of each video is around 20 minutes. They can be used as references and learning media regarding Tsunami Drills, Evacuation Planning, and Socialization. Although the main target is the project's pilot areas in Java, the videos can also be shared with decision makers and organizations in other areas.

Budi Jadi Sunatan

Description:

GTZ IS-GITEWS and JIWA production house developed a video that addressed common misconceptions about tsunami among people. "Budi Jadi Sunatan" (Budi finally gets circumcised) is a 30-minutes edutainment video that provides basic information and motivates people to improve their strategies in facing tsunami. The target audience are communities in prone villages in Sumatra, Java and Bali. This video helps translating a rather complex technical topic into easy-to-understand information, by simplifying the language and presenting the ideas in a simple short story about Budi and his village.

Project Documentary of DRR and Inclusive Schools: Widening Access For Children With Disabilities

Description:

A 12 minute documentary of DIPECHO (European Commission Disaster Preparedness Programme) co-funded project, DRR and Inclusive Schools: Widening Access for Children with Disabilities. The project was run in close coordination with the provincial and district education offices and provided DRR trainings and materials to all 126 inclusive schools in Yogyakarta. Alongside trainings, the project also provided improved access and evacuation routes at schools. At the end of the project, 598 classroom teachers, 63 special teachers were trained and 1,888 children with disabilities completed evacuation drills.

Ayo Siaga, Kurangi Risiko Bencana!

Description:

“Ayo Siaga, Kurangi Risiko Bencana” (Be Prepared, Reduce Disaster Risk) is the title of the movie. Narrated in Bahasa Indonesia with English Subtitled, the documentary presents a comprehensive picture on disaster risk reduction initiatives in Indonesia for the past four years. The movie presents many slides involved in DRR: from Government Institutions, NGO’s, Red Cross, Community Organizations, Academic Institutions and international organizations to traditional tribes and ordinary people. The film starts with a powerful sequence highlighting the number of natural disaster that occurred in Indonesia for the past ten years: earthquakes, floods, volcano eruptions, tsunami and landslides. It also highlights the human loss. The key message is the number casualties could have been considerably ameliorated if the people would have been prepared.

What needs to be taken into consideration –also includes in this movie- is the climate change as a new factor when analyzing the risk. New areas might be prone to natural disasters. Climate change expert explains the importance of being aware of climate change when developing DRR initiatives.

Child-led Disaster Risk Reduction, A Practical Guide

Description:

This publication is produced as the result of collaboration between Save the Children Sweden, Save the Children UK and Save the Children US.

Following the Asian tsunami of 2004 Save the Children made Child-Led Disaster Risk Reduction (CLDRR) one of their key priorities in reconstruction and the policy of improving what existed prior to the disaster. This led to the first workshop in Hanoi in June 2006, which brought together practitioners from across the region to work on a common CLDRR definition and framework. Save the Children held a follow up workshop in Agra in December 2006, which cemented these ideas and allowed for the drafting of a common framework and process of implementing CLDRR. The framework precedes the program guide and forms the structure of this guide – each sub component is listed, explained and working examples given from programs around the region. The framework is a guideline and should not necessarily be followed sequentially – several of the components should ideally run simultaneously. There is a logical progression throughout, but it is important to tailor the framework to specific circumstances.

Pedoman Pelatihan Pengurangan Risiko Bencana yang Dimotori oleh Anak-anak

Description:

This training manual, Child-Led Disaster Risk Reduction in Schools and Communities, is produced by Save the Children based on the experience of the pilot project in tsunami affected provinces in southern Thailand - as a guide for organising activities to strengthen children's capacity in disaster risk reduction in schools and communities. This manual aims to promote leadership by children and young people in planning, analysing and conducting disaster risk reduction activities. This training manual, Child-Led Disaster Risk Reduction in Schools and Communities, is produced by Save the Children Sweden and Save the Children UK, and later Save the Children US in Indonesian language as a guide for organizing activities to strengthen children's capacity in disaster risk reduction in schools and communities.

Save the Children produced this training manual using a process developed by Marta Casamort Ejarque (DRM Project Co-ordinator and Consultant) for a disaster risk-reduction project, Listening to the Water, operated by Save the Children UK in Cuba. The first draft of this manual was refined as a result of two disaster risk-reduction training workshops for youth trainers in August and September 2006. The project partners, Rabatbai Group, Duang Prateep Foundation, the Asian Resource Foundation and the Youth Network for Development, then used the draft manual in their work with children in southern provinces of Thailand. In January 2007, Save the Children and its partners revised the manual again. The outcome is the training manual before you now.

From Save the Children's experience in 2006, children's participation in conducting disaster risk-reduction activities in their communities shows clearly that children not only are 'victims' of disasters but are capable citizens who, with proper and sufficient support from adults, can truly participate in activities that are beneficial to their societies.

This manual aims to promote leadership by children and young people in planning, analyzing and conducting disaster risk-reduction activities by providing training on the following topics.

- Concepts and definitions relating to disaster risk reduction.
- Risk and resource community mapping.
- An educational campaign on disaster risk reduction.

Emergency Preparedness for Deaf Children (Vulcano, Flood, Landslide, Whirlwind)

Description:

A 60 minute school based drama consisting of 4 separate stories of how to prepare for 4 different hazards (floods volcanoes, landslides, and whirlwinds). The drama is set up to be used in inclusive settings with students with different disabilities, together with non-disabled students. Indonesian Sign Language combined with American Sign Language is used; however subtitles and voice dubbing make it accessible for people without knowledge of sign language. This material assists teachers who have limited teaching capacity to teach deaf students. The drama is self-explanatory and easy to follow by all ages. A VCD player is required.

Bahan-bahan Learnscapes

Description:

'Learnscapes' Resources DVD ROM Children's education materials

Includes IDEP Foundation's range of resources for children's education in sustainable development and disaster preparedness. The DVD's contents can be used on, and projected from any computer with a DVD drive. A brief description of the contents of this 'Resource DVD ROM'.

Teacher and educator resources

A wide range of easy-to-follow and adapt teacher's resources covering topics related to environmental management, eco-litteracy and disaster risk reduction. These resources can help for developing and delivering dynamic lesson plans for in-class and outdoor education activities. Includes detailed lessons, photocopy-able resources, and fun activities that function as lesson evaluations for keeping track of student comprehension of the materials delivered.

A range of educational videos appropriate for children

A wide range of fascinating, child-friendly educational films that support environmental education, sustainable community development and disaster risk reduction. The DVD ROM also includes documentary films showing examples of local children doing a range of related activities.

Printable activities for kids

Educational games and activity sheets that can be used directly by children and their educators to introduce, explore and learn about issues related to environmental education, sustainable community development and disaster risk reduction. Includes printable activity sheets, fact sheets for projects to do at school or home.

Books and posters for children

Educational comic books and campaigning / public awareness posters designed by and made for children to explore and learn about issues related to environmental education, sustainable community development and disaster risk reduction. Includes printable samples of each item for learning at school or at home.

Series of slide shows, with photos of Learnscapes activities

Each of the slide shows in this collection includes a range of photos that show 'Learnscapes' activities on the ground in local schools in Indonesia. Topics covered include gardening, waste management, learning with animals, disaster education and more.

Saatnya Siap Siaga

Description:

Educational community based disaster management (CBDM) videos that can help local communities and decision makers to gain a better understanding of the key concepts of effective CBDM and inspire people to start CBDM activities in their areas. Available on DVD or VCD. Titles:

- What is Community Based Disaster Management?
- Disaster Management Community Group
- Preparedness Planning
- Basic Emergency First Aid Techniques

A brief description of the films included on this disk

- What is Community Based Disaster Management? (17 minutes)

This film explains the importance of local communities being prepared to face disaster, and introduces the basic concept of community based disaster management. It features messages delivered by several Indonesian celebrities and footage from CBDM activities throughout Indonesia that can help to motivate and empowers everyday people to take responsibility for the safety of their own communities.

- Disaster Management Community Group (17 minutes)

This short drama is an engaging story that demonstrates how people in a local community worked together with their village leader, community members and other local stakeholders to establish a community group to manage disasters. The group then implements activities for community disaster preparedness and management. This film addresses some of the key questions that arise when establishing disaster management community groups in Indonesia.

- Preparedness Planning (16 minutes)

This film shows examples from many different areas of Indonesia where communities are planning and preparing for possible disasters. The film helps people to better understand the basic principles of CBDM. It covers risk assessment, disaster mapping, evacuation planning, community wide disaster response practice drills, and collaboration and cooperation with key stakeholders for disaster management.

- Basic Emergency First Aid Techniques (17 minutes)

This instructional video explains how to administer first response (basic first aid) in an emergency situation. The information in this video enables every-day people to save lives and respond effectively should disasters occur.

Mina & Desanya Bekerja Bersama Lingkungan

Description:

A series of educational films that introduce waste management, water and forest conservation, and disaster preparedness in a fun and memorable way. Available on DVD or VCD. Titles:

- Mina's Village and the Forest (ACCU)
- Mina's Village and the River (ACCU)
- Mina's Village Says "Yes!" to Waste Management (ACCU)
- Mina's Village Weathers the Storm (ACCU)

A brief description of the films included on this disc

- Mina's Village and the Forest (18 minutes)

This film teaches children and their communities about the importance of forest conservation. It tells the story of a young monkey named Lolo who is separated from his family when his forest home is destroyed by fire. Mina and her friends take care of him and replant the forest, but will Lolo be able to return to the life he once loved?

- Mina's Village and the River (16 minutes)

This film teaches children and their communities about the dangers of water pollution for our health and the environment. Mina's family gets food poisoning from eating fish from a polluted river. With support from their community they improve the local environment and clean up the river.

- Mina's Village Says "Yes!" to Waste Management (19 minutes)

This film teaches children and their communities about the importance of community waste management. It tells the story of Mina and her friends as they work together to improve waste management in their village. They decide to act after Mina's pet goat dies from eating a plastic bag and other children in the village get sick due to improper waste treatment.

- Mina's Village Weathers the Storm (16 minutes)

This film teaches children and their communities about disaster response. While Jai is away at his parents' place, a big storm hits the village. Mina and her family evacuate to their neighbor's house, but what about Jai? In his parents' village there seems to be a lot of damage and a little girl is missing.

Category:

Game

Description:

This material consists of 11 cards on safety tips in the event of an earthquake specifically designed for deaf children/students. Each card has a picture, text, and simple sign language. This material utilizes and adapts total communication methods, which are very helpful to deliver information to deaf children/students. Also, simple signs can be practiced by students and teachers so that teachers can give quick and precise instructions to deaf students during and after an earthquake.

Description:

This is a card game specially designed for deaf students which goes with a VCD for earthquake preparedness. It consists of 8 pairs of cards which illustrate right and wrong actions for earthquake preparedness and evacuation. Teachers can use these cards to check students' understanding of the lessons. The pictures are more visually appropriate for deaf students. The answers and explanations are written on the back of the cards with simple sign language of right and wrong.

Description:

The material is in the form of large teachers' flash cards that are be used to present a story concerning earthquake preparedness, that is, what to do and what not to do when an earthquake happens. The large cards are illustrated with vivid pictures using the theme of a daily life story. The story aims to introduce the procedures on how to evacuate from school building. The cards are highly user friendly. The narrative text on the back of the pictures helps teachers to read the story and highlight key points for emphasis. Teachers can use the materials as a story sequence or stand-alone picture to reinforce their teaching.

Description:

Series of pictures (without story) related to preparedness and evacuation in the event of volcanic eruptions. Pictures present information about the dangers from volcanic eruptions such as lava, pyroclastic flows and poisonous gas.

Information on these dangers is provided on the reverse of the pictures. The information is secondary to the establishment of effective evacuation procedures and the materials are designed to support such measures. The information is best suited to primary and junior high school levels, however, as the information is quite technical in nature teachers should gauge the suitability of the information to different levels.

Description:

The TsunamiKit is a compilation of experiences, lesson learnt and results from more than four years of close cooperation between numerous individuals, working groups, institutions and GTZ IS GITEWS Project from various levels and background in the three GITEWS Pilot Areas and beyond. It captures the development, working process, and testing of the mechanism and procedures for tsunami early warning and preparedness at community level within the framework of the implementation of InaTEWS. The TsunamiKit is intended to be used as references for further up scaling and sharing to other coastal communities and their government in tsunami prone areas. Two language versions, Indonesia and English, of TsunamiKit has been produced in three different forms i.e. Bags, Website, and DVD. For further Information please visit www.gitews.org/tsunami-kit

The content of the kit is organized according to the key elements of tsunami early warning:

1. Risk Knowledge (Red)
2. Monitoring and Warning Services (yellow)
3. Dissemination and Communication (blue)
4. Response Capacity (green)
5. Knowledge and Awareness (purple)
6. Governance and Institutional Arrangements (grey)

For each of the six elements different types of documents have been prepared, which either provide background information or support for local stakeholders to plan and implement tsunami warning and strengthen preparedness:

- Intros provide essential background information and an overview of the content of the Kit related to the respective element
- Checklists help local stakeholders to plan and monitor their efforts in early warning and preparedness.
- Tools provide practical advice for implementation in the form of manuals, guidebooks and guidelines.
- Best practices and experiences from the work of the pilot project are portrayed in brief factsheets, called Our Experience and Info.
- A collection of materials for public education can be found under Outreach Materials.
- Other useful information and references are compiled in the Further Resources part of the kit.

Description:

Additionally a guidebook and a visualization tool, called “Lembar Balik”, were developed to assist local facilitators to prepare and implement community events. The guidebook explains: (1) Steps to conduct community events, from preparation up to implementation; (2) topics to be discussed with the community (knowledge on tsunami hazard, warning chain, how we react, knowing my area or introduction on evacuation plans). The “Lembar Balik” is a visual aid to explain the principle topics related to tsunami preparedness and is used by local facilitators during community events. Other materials like videos, comics and posters were made available to be used and distributed during community events.

PHASES OF AN EARTHQUAKE DRILL

Phase 1. Alarm

Using the alarm (or other sound) to alert the students.

Phase 2. Response

Make the alarm (or other sound) louder and longer to alert the students to respond to the alarm.

Phase 3. Evacuation

Give the students the signal to evacuate the building.

Phase 4. Assembly

All the designated evacuation areas, students should assemble together according to the plan when they evacuate.

Phase 5. Head count

Check the number of students in each area to ensure that all students are accounted for.

Phase 6. Evaluation

Discuss the drill with the students to identify problems and to improve the drill for the next time.

Description:

This fan was specifically prepared for teachers as a simple guide on the 6 phases of an earthquake drill from (1) Alarm (2)Response (3) Evacuation (4) Assembly (5) Head Count and (6) Evaluation
